

Ivanti Asset Central

Ivanti® Asset Central is a comprehensive lifecycle management tool. It features a set of automated workflows and processes to improve IT asset efficiency and reduce IT support and maintenance costs. The solution can help you jumpstart strategic asset lifecycle management and optimize hardware and software assets from purchase through disposal. You gain at-a-glance information on managed assets, where they reside, and how they're used. Asset Central is offered on-premise and in the cloud.

Track Lifecycles for Complete Asset Optimization

Track hardware and software lifecycles to lower maintenance spend, provision new assets quickly, and control IT costs while maximizing the value of your assets. Monitor assets from onboarding to disposal. When you better understand the changes that happen throughout the lifecycle, you can make informed purchasing decisions, replace consumables at the right time, and empower management with accurate, thorough information about total cost of ownership.

Accelerate Productivity with Processes Out-of-the-Box

Out-of-the-box processes accelerate new-hire productivity by giving end users the right tools at the right time, and reduce financial and security risk by tracking assets through their entire lifespan. Eliminate systems downtime due to hardware failure through timely maintenance and replacement processes. By establishing the right processes, you increase organizational efficiencies and provide users what they need to succeed at their jobs. Asset Central includes processes like lifecycle management, disposal, software audit, contract management, and more designed to address real customer pain points.

Integrate with Ivanti Service Desk

Asset Central integrates with Ivanti® Service Desk for easy request management. Users benefit from a rich self-service experience as they navigate easily through an approved service catalog, alleviating pressure on IT staff. In addition, Asset Central enhances change management by processes and policies by providing status updates to IT assets, maximizing productivity.

Automate Software Reclamation for Client Apps

Running an asset report monthly or quarterly can reveal over an extended time period applications that aren't being used. However, these time gaps may lead to new purchases unnecessarily when software could have been reallocated. With Asset Central you can define appropriate timeframes based upon the application and user. Applications can be monitored for usage more closely and reallocated when appropriate.

Anticipate and Schedule Hardware Refreshes

Knowing what hardware needs to be purchased, updated, and maintained enables IT management to plan ahead and avoid hasty purchasing decisions. When you calendar refreshes for speedy deployment of new devices and schedule maintenance of owned hardware, end users benefit from the right tools to be more productive.

Gain Financial and Contractual Visibility

Establish processes to monitor and manage existing contracts and negotiate new contracts. With Ivanti Asset Central you can validate purchased assets while keeping tabs on in-place contracts. Import directly from the supplier and track lease, warranty, and financial management information automatically at the time of hardware purchase.
