Ivanti Velocity Browser

Web applications have a long and proven history. You've invested in these systems, and want to be sure you can leverage them, even as you explore a new, expanding generation of mobile-device hardware—including Android, iOS and Windows 10-based options—for your workforce.

The challenge is, you've been running WinCE or Windows Mobile for a device generation or two. How do you bring that mobile interface forward to fully leverage the touchscreen experience offered on today's growing selection of Android, iOS, and Windows 10 mobile computers? The Velocity browser from Ivanti is your answer.

## Bring Existing Web-based Systems to Android, iOS, and Windows 10

Your existing enterprise system is ready for your next-generation mobile devices. Whether SAP ITSmobile, Oracle, or any other leading web-based host systems, you can deploy Android, iOS, and Windows 10 without changes to your systems.

Device-tailored Clients

Our browser solutions are designed for the specialized technologies embedded in many leading mobile computers, which means your web apps can take full advantage of your preferred mobile devices with a consistent user experience.

Enhance Your Legacy Mobile Web Apps

Velocity is your pathway to bring existing Ivanti Industrial Browser applications to touchscreen devices and the Android, iOS, and Windows 10 operating systems. Are you running Naurtech CETerm? No problem! Velocity takes those apps forward with ease.

Keep Workers Focused on Tasks

Don't let Web browsers cause security concerns. Keep workers out of browser controls and focused on the task at hand.

Powerful Scripting

Enhance your mobile app workflows by scripting repetitive tasks. Your workers will speed through tasks more quickly, completing more of them each day.

Voice-Enabled Web Apps

Add the power of bi-directional voice to your web apps. Speech-to-text and text-to-speech help keep workers' hands free and their eyes forward for a more speedy yet safer work environment.

Faster Web Apps

Workers don't need to pause and wait for the browser to display the next screen in a workflow. Fast-rendering web apps accelerate task navigation, helping your workers ship more product in less time.

Apps Optimized for Android

Your web-based enterprise systems were designed for desktop browsers. Still, when you're ready to migrate to Android mobile computers, you want apps that look good on these bright, high-res device screens. With Velocity, custom HTML and CSS injections empower you to deliver apps optimized for Android devices and their various screen sizes.

Run Multiple Browser Sessions

Just like our Naurtech CETerm and Industrial Browser products for Windows, launch additional web sessions in Velocity with a single tap. Workers multitask, and so can your mobile app!

SAP® Certified
Integration with SAP S/4HANA®
