

Ivanti Endpoint Security for Endpoint Manager

Ivanti Endpoint Security for Endpoint Manager, powered by Landesk, prevents, detects, and remediates even the most sophisticated ransomware and other threats. Powerful, multi-layered protections automate discovery, inventory, and patch management, prevent malware from running or spreading, and enable remote control and remediation of infected systems. Flexible reporting and information visualization features improve compliance and help you pass more audits. And integration with Ivanti® Endpoint Manager increases efficiency and control over your IT environment.

Protect Your Environment from Ransomware and Other Modern Threats

With Ivanti Endpoint Security for Endpoint Manager, you can see everything necessary to find and remediate malware, diagnose problems, and identify faulty or non-approved processes. If ransomware invades your network, Endpoint Security will catch it, kill it, notify other connected machines, and block the malware from running on them. Powerful remote capabilities mean you can isolate, investigate, and clean endpoints across the network. Additionally, device blocking and connection control let you monitor and restrict access for I/O devices. Application control features guard against zero-day exploits, stealth attacks, and other sophisticated threats. And data protection features prevent malicious software from encrypting your files.

Discover and Inventory All Your Networked Devices and Software

Active and passive discovery technologies identify and inventory all IP-enabled devices in real time—even so-called “rogue” systems and those behind firewalls. Automatic discovery also helps you find all the software on those devices, including usage details. And when used with the Ivanti® Cloud Services Appliance, Ivanti Endpoint Security for Endpoint Manager can inventory systems and devices in the cloud, without the need for virtual private network (VPN) connections.

Ensure Your User Environment Is Stable and Secure with Automated Patching

Ivanti Endpoint Security for Endpoint Manager simplifies patch management with best practices, automated processes, no impact on users, and fast deployment. It patches all devices and third-party software across your network reliably—even those devices that are on the road, at a remote site, or asleep.

Harden Endpoints with Device and Connection Blocking

Device control and application firewall capabilities limit the types of external devices or connections that endpoints can access. You can also detect and lock out malware on storage devices that connect to endpoints, and block malware from “calling home,” rendering most of it useless. The solution logs which files are copied to external devices, so you can rest assured you’ll pass your security audit.

Protect Against Zero-Day Threats with Advanced Application Control

Application control features protect against file-based and fileless attacks by preventing malicious software and scripts from executing, and by using memory protection techniques. Learning capabilities minimize false positives and allow legitimate apps to run uninterrupted. A cloud-based

reputation database provides further insights about which apps should be allowed to run in your environment.

Protect Your Customer Data—and Your Bottom Line—with Greater Compliance

Ivanti Endpoint Security for Endpoint Manager provides standardized configurations and workflows for a variety of government and industry regulations, including PCI-DSS, SCAP, FERPA, HIPAA/HITECH, and SOX. This means you can safeguard customer data, preserve your enterprise's reputation, demonstrate compliance to auditors and executives, and protect the bottom line against financial penalties and lawsuits.

See Threats, Act Quickly, Show Results with Workspaces, Dashboards, and Reports

Ivanti Endpoint Security for Endpoint Manager also provides an array of reports and executive dashboards to help you monitor the effectiveness of your security efforts. These include detailed reports on policy enforcement, compliance levels, user behavior, patch status, real-time security outbreak alerts, and much more.

Reduce Risk by Integrating Endpoint Security with Endpoint Manager

As its name implies, our solution integrates with Ivanti Endpoint Manager to unify endpoint security and management. This enables fast automation of both security and IT management policies, optimizing IT time and

resources. Gain unequaled visibility across IT security and management activities to reduce risk and improve decision-making. Endpoint Manager integration also adds the enhanced mobile protections of Ivanti® Mobility Manager.

Manage and Secure Remote Devices

The solution uses FIPS140-2 certified encryption to secure management data of remote devices connected through the Ivanti Cloud Services Appliance.

Integrate Your Preferred Antivirus Solution

In addition to providing Ivanti® Antivirus Manager to protect against known malware, Ivanti Endpoint Security for Endpoint Manager integrates with and lets you manage third-party antivirus solutions of your choice.
