Ivanti Asset Management Suite

Gain complete visibility to maximize the performance and value of your hardware and software assets. Reclaim unused software, meet compliance requirements, and save time with a centralized view of your assets. No more guesswork on where you stand with your effective license position. Know what assets you have, where they are, how they're used, and how they perform for better decisions at any stage of an asset's lifecycle.

Leverage Powerful Discovery and Inventory Processes

Identify what hardware and software exists in your IT environment. Ivanti® IT Asset Management Suite aggregates data automatically for clients or servers. Make informed decisions from the moment you purchase an asset through its entire lifecycle. The ITAM Suite publishes analytical data and management reports to tablets, smartphones, or any device with an Internet browser. Executives and IT management teams obtain a complete picture of which assets are in use and gain direct insight into their current state of compliance. Correct information delivered at the right time drives confidence in data and enables accurate decisions.

Achieve Complete Visibility of All IT Assets with B2B Connectors

Eliminate spreadsheets and gain vendor visibility with business-to-business (B2B) connectors that aggregate manufacturer, vendor, and reseller data such as purchase order numbers, device types, and location mapping from the moment you acquire a new asset. In addition, automatic processes improve efficiencies and reveal more usable data on demand, which takes months to gather otherwise.

Reclaim Operational Expense and Survive Audits

Software license true-ups are a thing of the past. Now you can maintain software license compliance for audits and curb overspending on software applications. The Suite delivers timely information to auditors and calculates your effective software license position by identifying who is using what software and under what licensing agreement it's covered. You gain better visibility into software and asset lifecycles, licensing,

and ownership. Reclaim unused software licenses automatically to reallocate needed resources elsewhere, or renegotiate your licensing terms and agreements to reduce the risk of financial drain.

Craft Lifecycle Processes around Your IT Assets

Knowing what hardware needs to be purchased, updated, and maintained enables IT management to plan ahead and avoid hasty purchasing decisions. Calendaring refreshes to speed deployment of new devices and scheduling maintenance of owned hardware means end users gain the right tools when needed to be more productive.

Save time and money with more than 40 automated processes, including onboarding and offboarding, software audit, and others.
