

Ivanti's take on European and United Kingdom Data Sovereignty and Privacy Regulations

As technology continues to evolve and data transmissions occur on a global basis, data privacy has become one of the most important aspects of business today. This document will explain how Ivanti handles data sovereignty as well as how the company meets specific European Data Privacy regulations.

1.0 Brexit and GDPR

As of January 1, 2021, the United Kingdom (UK) will no longer be part of the European Union (EU). Ivanti expects that privacy regulation in Europe and the UK will be reciprocal and that a reciprocity agreement will be in place. As a result, data location will have more to do with the customer's data sovereignty desires than strict GDPR compliance requirements. Additionally, Ivanti expects there to be a UK version of GDPR and is intending to follow this regulation when it becomes official law.

2.0 Privacy Shield and Standard Contractual Clauses (SCCs)

On July 16, 2020, the European Union Court of Justice invalidated the EU-US Privacy Shield as it was determined that Privacy Shield did not comply with the level of protection required by European law. On September 8, 2020, the Swiss Data Protection Authority also declared the Swiss-U.S. Privacy Shield invalid as it was deemed inadequate

for the purposes of transfers of personal data from Switzerland to the U.S.

Ivanti is a current member of Privacy Shield and intends to become a member of Privacy Shield 2.0 when it is passed by the US Department of Commerce and the UK Data Protection Authority. As a general rule, European Customer Data does not enter the United States (this applies to both EU and UK Customer Data). For customers that require additional privacy compliance measures, it is possible for Ivanti to enter into Standard Contractual Clauses as needed.

3.0 Data Sovereignty

Data Sovereignty, the concept that data stored within a country's boundaries are required to follow that country's laws, is a critical concept when it comes to data privacy regulations. At this time, Ivanti intends to have Data Centers located in Germany and the United Kingdom. This will allow customers the ability to designate where they would like their data to reside.
